HOW TO ENSURE PROPER FUNCTIONALITY OF BOTH THE DISPLAY AND THE CAMERA

To ensure proper functionality of both the display and the camera when connected simultaneously, follow these steps:

1. Connect both the display and the camera while the Raspberry Pi is powered off;
2. Download both the 'original-directory' and 'modified-directory';
3. Navigate to the original directory and make 'LCD-hdmi' and 'LCD35-show' executable using the following commands:

   `- chmod 755 <fileName> / chmod u+x <fileName>`

4. Execute 'LCD-show' by running the command:

   `- ./LCD-show`

5. Reboot your Raspberry Pi; you should now see your desktop on the display;
6. Return to the original directory and execute 'LCD-hdmi' using the command:

   `- ./LCD-hdmi`

7. Reboot your Raspberry Pi;
8. Navigate to the modified directory and make 'hdmi' and 'show' executable by typing:

   `- chmod 755 <fileName> / chmod u+x <fileName>`

9. If you wish to use the display and the camera, go to the modified folder and execute 'show' by typing:

   `- ./show`

10. To revert back to the monitor, execute 'hdmi' by typing:

    `- ./hdmi`
