INSTALLING LISA DEPENDENCIES IN A VENV

In order to install dependencies in a virtual environment, you first need to install all dependencies listed in the '*requirements.txt*' file.
Once you're in the virtual environment, you can do that with:

- *pip3 install -r requirements.txt*

Then you need to install the pycoral library, running the following commands:

- *python3 -m pip install --extra-index-url https://google-coral.github.io/py-repo/ pycoral~=2.0*

- *sudo apt-get install libopenblas-dev*
